

What we still need from the kitchen

Woodlands Indian Cuisine · inventory system · 17 September 2026

Type straight into the boxes and save, or print it and write on it.

Every box has been left empty on purpose. A plausible number written here by anybody other than the kitchen would be believed by the system and would be wrong. Rough answers are fine — “about half a pound”, “four or five bowls”. The first two pages matter most; if nothing else gets done, do those.

1. How many servings one batch gives

One number each, and the most useful thing on this sheet. Without it the system cannot answer “enough for 100 people”, which is the question asked before every party and every festival day.

RECIPE	ONE BATCH MAKES	SERVINGS FROM THAT
Avial	—	
Basic Gravy	1 bucket — usually lasts 2 weeks,	
Basic Kurma Sauce	—	
Butter Masala	1 large soup chafer of concentrate	
Dhal Fry	large chafer pot	
Kadai Sauce	one 2.5" full pan	
Manchurian Sauce	—	
Poriyal	—	
Rasam	1 bucket of concentrate = 4 bucket	
Sambar	2 buckets	
Sambar Podi	$\frac{3}{4}$ bucket	
Tempering	1 plastic jar	
Tomato Chutney	1 bucket	
Uppuma	—	
Vegetable Kurma	medium soup chafer	

2. The two batters, and the chutneys

Nothing at all is written down for these. The batters matter most — they are what the whole system was built around.

Dosa batter — urad, rice, dalia, fenugreek per grind, and what one grind makes

Idly batter — the same

Coconut chutney

Mint chutney

3. What the vessels hold

These are used across many recipes, so one answer each fixes a lot at once.

VESSEL	IT WEIGHS OR HOLDS
1 pot of water	
1 large ladle	
1 cap (as used for methi and black pepper)	
1 bunch of cilantro	
1 handful of mixed vegetables	
1 bucket of sambar	32 lb — already answered, confirm?
1 bucket of rasam	
1 bucket of basic gravy	
1 bucket of tomato chutney	
1 large soup chafer of butter masala concentrate	
1 2.5-inch full pan of kadai sauce	

4. What a scoop of each of these weighs

A scoop is a vessel, not a weight: a scoop of toor dal is 32 oz and a scoop of sambar powder is 14 oz. These are the bulk ingredients, where being wrong costs the most.

A SCOOP OF...	WEIGHS
cashew halves	
chana dal	
diced cabbage	
diced tomato	
dried shredded coconut	
frozen sambar vegetables	
idly rice	
sambar powder	
whole coriander	
whole cumin	
whole dried red chilli	

whole fennel

yellow moong dal

5. Spoons — one question rather than thirty

A spoon of turmeric was weighed at 1.4 oz and a spoon of salt at 2.2 oz. Rather than weighing a spoon of every spice, please answer the question below. If the answer is “about the same”, say which figure to use.

Is a spoon of most ground spices close to the same weight? Which figure should we use, and which ones are noticeably different?

There are 32 ingredients measured in spoons across the recipes. If some are very different — a spoon of oil against a spoon of hing — those are the ones worth weighing separately.

ANY THAT ARE DIFFERENT — A SPOON OF...

WEIGHS

6. Serving sizes

These are sold both on a plate and in a tub. The tub sizes come from the till; a plated serving is not written down anywhere.

ITEM	A PLATED SERVING IS	SOLD IN TUBS OF
Rasam		16 oz
Chana masala		4 / 8 / 16 oz
Sambar		8 / 16 oz
Dosa batter		32 oz
Idly batter		32 oz
Potato masala		8 / 16 oz
Coconut chutney		4 / 8 / 16 oz

7. How each one is made

The document we have gives quantities only. For each: the order things go in, roughly how long, and how you know when it is right. Rough notes are fine — they will be typed up and brought back to you for checking.

Basic Gravy

Basic Kurma Sauce

Butter Masala

Dhal Fry

Kadai Sauce

Manchurian Sauce

Poriyal

Rasam

Sambar

Sambar Podi

Tempering

Tomato Chutney

Uppuma

Vegetable Kurma

8. Anything else worth writing down

Notes
